# EFFICACY & SAFETY

Disposable balls for cleaning  
of the endoscope channels

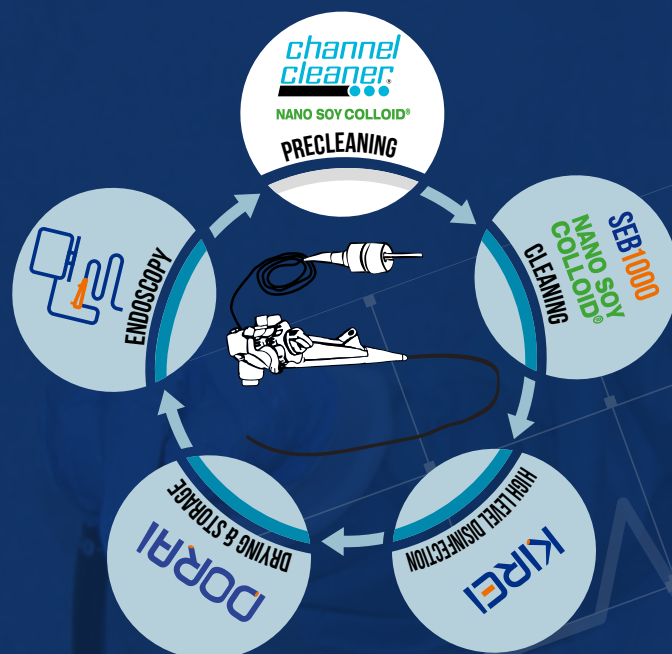

## ADVANTAGES

- High degree of cleanliness,  
Ease of use and Speed
- Reproducibility and  
Standardization
- Ergonomic: reduced risk  
of occupational diseases

## INNOVATION AND SAFETY

Manual cleaning of endoscopes is the most critical part of reprocessing. At the end of the endoscopic examination, the operator aspirates a cleaning solution through the endoscope channels to remove gross debris from patient secretions, mucus or blood.

Channel- Cleaner balls, aspirated from the distal endoscope, pass through the biopsy and aspiration channels. A trap allows the operator to verify proper ejection. The passage of the balls through the channels allows cleaning and brushing of the walls.

Effective, safe, repeatable and fast channel brushing,  
thanks to the microspheres consisting of more than a million fibers with a size of only a few microns.

## AVAILABLE MODELS

Model	Ball diameter
Channel Cleaner 2.0	2.0 mm
Channel Cleaner 2.8	2.8 mm
Channel Cleaner 3.2	3.2 mm
